

# COEO's SD-WAN Solution

If your organization is facing challenges with poor network performance, unreliable VPN connectivity, or increasing security threats, SD-WAN can provide a solution that addresses these issues. Our solutions enhance network uptime, optimize performance, and strengthen security to protect your business from cyberattacks and data breaches.

## Improve Network Performance and Security With SD-WAN

### Unified Threat Management (UTM)

Unified Threat Management (UTM) combines essential security features like Anti-Virus Software, Intrusion Detection and Response, and Malware Protection to safeguard your network against a wide range of threats.

### Routing Efficiency & Performance

SD-WAN failover enables your network to seamlessly connect to multiple internet connections simultaneously, ensuring maximum uptime and uninterrupted performance.

### SASE and SSE

Coeo's SD-WAN can be integrated with SASE and SSE to strengthen your WAN security, providing enhanced protection and optimized network performance.

### Zero Trust Network Access (ZTNA)

ZTNA is an additional security feature that can be integrated into Coeo's SD-WAN, working alongside SASE and SSE to further enhance your WAN security.

Your network must stay connected, optimize routing, and enhance security to keep your business productive while ensuring the safety of all data, information, and connections.

### About COEO Solutions

Founded in 2014 and headquartered in Downers Grove, IL, Coeo is committed to enhancing connectivity for organizations.

We specialize in optimizing phone and network performance, backed by our reliable 24/7 US-based customer support.

### Why Choose us

Coeo stands out by delivering a white-glove experience, providing dedicated resources to help customers design, implement, manage, and maintain their telecom and network solutions with expert support every step of the way.
