# Infrastructure as a Service

Leverage our industry leading digital infrastructure as a service backed by high-performance and high-availability solution supported by the latest hyper-converged infrastructure platform powered by Nutanix.

Imagine being able to add Servers As many as you want and as quickly as you want. Create your own IT infrastructure, and configure it based on your own preferences.

## This would be ideal for you if:

- You want to reduce Cost and move from a CAPEX to an OPEX model
- You are concerned about data security and integrity and its anytime, anywhere availability
- You want to keep the keys to your virtual private data centers and control your own infrastructure
- You are moving into a hybrid workforce model where you have more employees on the go
- You want to scale up and down on the fly
- You have high end GPU requirements and want to keep cost minimal while keeping performance at a maximum

## Questions to ask and problems to solve:

- Do you want to future proof your enterprise via digital transformation?
- Do you want to keep control of your virtual infrastructure and manage it yourself?
- Do you have sensitive intellectual property/data that needs to be centralized?
- Do you want to enhance digital employee experience DEX via anytime, anywhere any device data availability and BC/DR initiative?
- Do you want speed time-to-market to get new products out and enable new CEO initiatives faster than expected?

## What does XTIUM IaaS Provide?

XTIUM Infrastructure as a Service provides customizable server configuration, instantaneous server resource modification, data sanctity through firewalls, port forwarding and netting capabilities, multiple sub-network addition facility, public IP assignment and VPN tunnels, active directory automation, redundancy through backups and much more and all that through a flat rate subscription-based model without any surprises on your cloud bill.

Our Infrastructure as a Service has a robust architecture, built in virtual and physical security measures and is designed to improve performance and efficiency where users can rapidly migrate their infrastructure to the cloud and digitally transform.
